

Pet Cot Assembly Instruction Manual

● Product Accessories

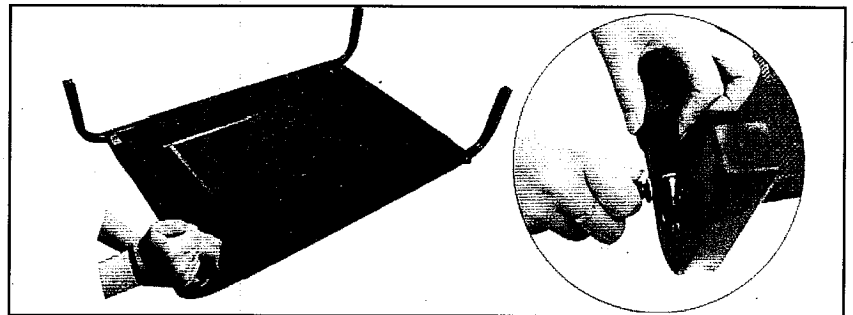

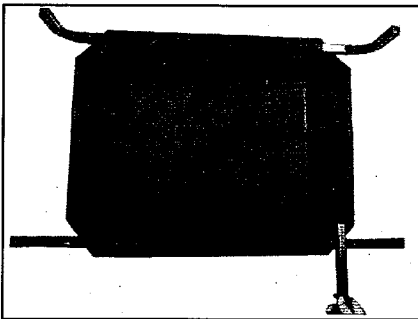

1 x Mesh Cover
2 x Curved Steel Tube
2 x Straight Steel Tube
1 x Wrench
4 x Screws
4 x Washer

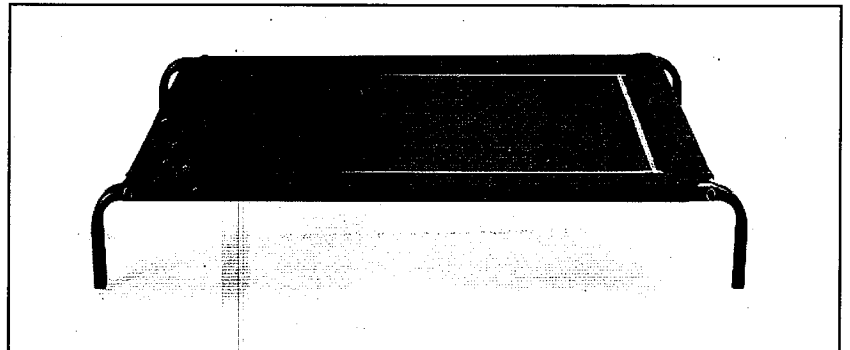

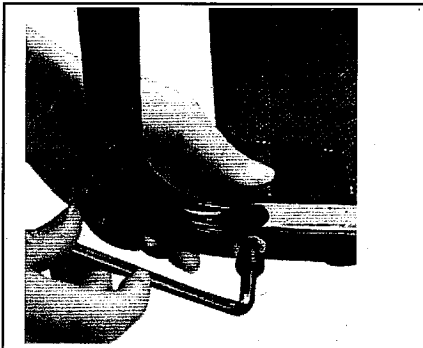

● Assembly Procedure

1. Lay mesh cover face down on a flat surface. Using one of the curved steel tubes, insert shorter side of steel tube into the longest part of the cover's opening. Slightly turn steel tube to a 45 degree angle as shown in second (2) picture above, and manipulate the mesh cover with left hand while gently pushing steel tube into cover, towards the opposite opening of the cover. (Crimpling of the mesh cover here is fine, as it will not affect the functionality of the cover on this product). *Do this on both ends of the cover using the other curved steel tube*

2. Once completed with step 1, adjust curved steel tube so that the legs are sticking up into the air, and insert straight steel tubes into the shorter ends of the mesh cover. Install screws into the curved steel tubes from the outside into the straight steel tube. Tighten with wrench. Repeat on all four corners.

3. Check that all screws are tightened before allowing your pets to use.

- *Not intended for use by children. This is NOT a toy.*
- *Please do not use excessive force when installing curved steel tubes into the mesh cover. Doing so may damage the cover and render it useless.*

■ *Do not over-tighten screws, as this will cause them to fall out of the threading of the part*
